

# What is inRentive?

inRentive is a cloud-based platform for managing your portfolio's marketing content, including photos, pricing, and availability.

It's designed to help you create the most detailed, accurate, and reliable listing information available on the web.

# How is it different?

inRentive partners with your existing property management software to automatically import your availability. For the first time, you can start marketing at the unit level, with exact pricing, availability, and floorplan-specific photos.

Now, you can truly give prospects what they are looking for—accuracy and timeliness!

# What can it do?

The information you keep inside of inRentive is the most complete marketing and availability content you've ever had. This means that your publishing channels become the best they've ever been.

With inRentive, you can publish to:

- Social channels (Facebook Availability)
- LocalSites (coming soon - ask us for details!)
- Select ILS Partners (coming soon!)
- Craigslist Publishing
